

Open to opportunities · open to relocation

Riski Hidayat
Fullstack Developer

Backend-focused fullstack developer building reliable web apps end to end — Go and Java Spring Boot APIs, React and TypeScript frontends.

ABOUT

Building dependable software, end to end

Fullstack Developer with 2+ years of experience designing, developing, testing and maintaining web applications, with a strong backend focus. I build RESTful APIs with Golang, Java Spring Boot, Node.js and PHP, and frontends with React and TypeScript (Zustand, Redux) on PostgreSQL, MySQL and Firebase Firestore. I enjoy translating business requirements into technical solutions, work comfortably in cross-functional Agile/Scrum teams, and use AI tools such as Claude Code and Cursor to write tests and debug faster.

2+	6	~20	3.89
Years building web apps	Shipped projects	Polytechnics using AITeC VI	GPA, D3 Informatics Mgmt.

Backend & APIs

RESTful services with clean layering, pagination, filtering, JWT auth and role-based access, backed by well-designed relational schemas.

Go · Spring Boot · Node.js · PostgreSQL

Frontend & Mobile

Typed React interfaces with predictable state management, and React Native apps wired to real APIs with correct request/response handling.

React · TypeScript · Zustand · React Native

Delivery

From requirements, ERDs and workflows to unit tests, UAT and containerised deployments, working in Agile/Scrum teams.

Docker · Linux · Git · Swagger

EXPERIENCE

Where I've worked

Freelance Fullstack Developer

Current · Dec 2023 – Present

Politeknik Negeri Lampung

Part-time · Remote & on-site · Lampung

- Analysed clients' business requirements and translated them into software solutions: system workflows, ERDs, database schemas, backend, frontend and deployment.
- Maintained and enhanced production systems used daily, built with Laravel and CodeIgniter 4, including investigating and fixing application issues.
- Worked independently with minimal supervision and full ownership of deadlines, communicating directly with non-technical users.

PHP · Laravel · CodeIgniter 4 · MySQL · Node.js · React

Backend Developer Intern

Nov 2025 – May 2026

PT. Enigma Cipta Humanika

Internship · Jakarta Selatan

- Joined as a Backend Developer Intern building services in Go, then reassigned to the frontend team mid-project to support development needs.
- Built and maintained RESTful APIs in Go, implementing CRUD for the Ticket, User, Tenant and Profile Management modules.
- Enhanced data handling with pagination, filtering and role-based user management.
- Developed frontend features with React.js and TypeScript, managing state with Zustand and integrating them with backend APIs.
- Investigated and resolved application bugs to improve stability, and took part in User Acceptance Testing (UAT) before release.
- Worked in an Agile/Scrum team through Sprint Reviews, Retrospectives and Backlog Grooming sessions.

Go · React · TypeScript · Zustand · PostgreSQL · Docker

Fullstack Developer Trainee

Mar 2025 – Jul 2025

PT. Enigma Cipta Humanika (Enigma Camp)

Bootcamp · Kota Malang

- Built REST APIs with Java Spring Boot and JPA applying OOP principles, designed PostgreSQL schemas, and wrote unit tests to meet a minimum 80% code coverage requirement.
- Built web interfaces with React.js and Redux and mobile apps with React Native; containerised services with Docker on Linux.

Java · Spring Boot · PostgreSQL · React · Redux · React Native · Docker

Network Operations Center (NOC)

May 2022 – Aug 2022

PT. Indonesia Trans Network

Full-time · Lampung Timur

- Monitored network operations and handled incident escalation and troubleshooting using MikroTik and Cisco equipment.

MikroTik · Cisco · Linux

PROJECTS

Selected work

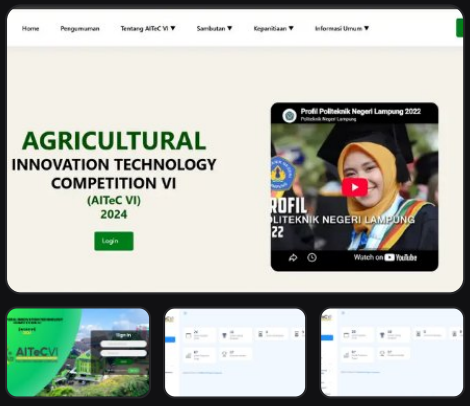

UNIVERSITY E-VOTING SYSTEM · Team Lead

PEMIRA Polinela

Campus-wide e-voting platform with auditable vote records, JWT auth and an admin dashboard.

- Led a team of three through technical discussions and architecture decisions, designing a separated frontend and backend with JWT authentication and Cloudinary integration.
- Built authentication, voting logic, vote counting and the admin dashboard, with a database schema that keeps vote records accurate, transparent and auditable.
- Now leading its redesign to Node.js, React and Docker on a VPS for better scalability and maintainability.

Node.js · React · PostgreSQL · Docker

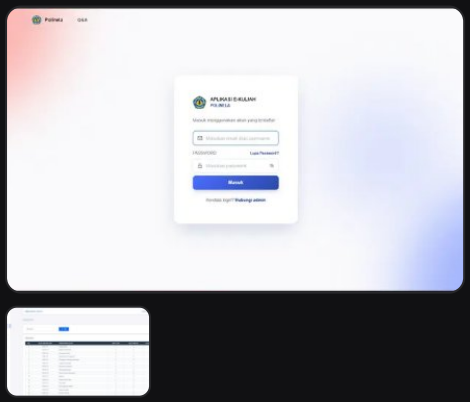

NATIONAL COMPETITION PLATFORM · Fullstack Developer

AITeC VI

Official registration platform used by around 20 polytechnics across Indonesia and Timor-Leste.

- Built the official registration platform for a national inter-polytechnic competition in a three-person team; live and used by around 20 polytechnics across Indonesia and Timor-Leste.
- Designed the database schema and registration workflow, and built the admin dashboard end to end for reviewing registrations and publishing results.

PHP · CodeIgniter 4 · MySQL · aitec-lampung.polinela.ac.id

ACADEMIC INFORMATION SYSTEM · Backend Developer

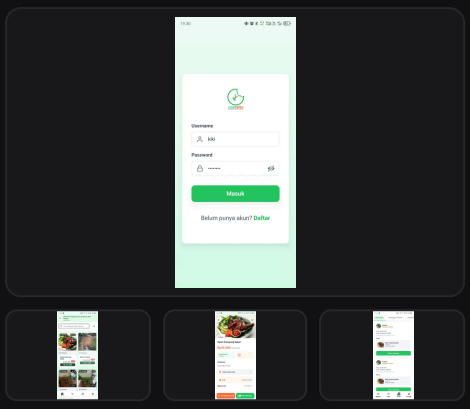

E-Kuliah

Academic system used by every student at Politeknik Negeri Lampung.

- Built CRUD modules for core master data (students, lecturers, technicians, academic years, staff, classes, departments) in an existing codebase used by all students at Politeknik Negeri Lampung.
- Maintained live features and fixed issues reported by users.

PHP · CodeIgniter 4 · MySQL · kuliah.polinela.ac.id

More projects

FOOD WASTE REDUCTION · CAPSTONE — Mobile Developer

LastBite

Mobile marketplace for surplus food, with Midtrans payments and a Spring Boot backend.

- As the mobile developer in a five-person Agile team, built authentication, food listing, ordering and profile features.
- Integrated Midtrans payments and Cloudinary, and agreed API contracts with the backend developer.

React Native · Spring Boot · PostgreSQL

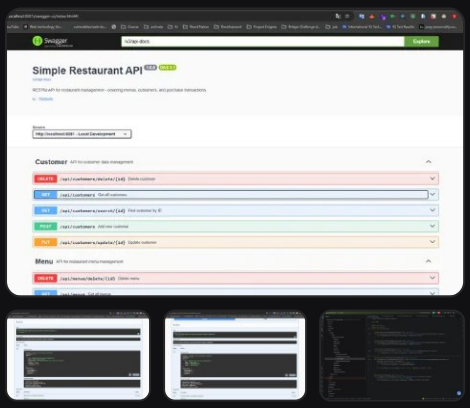

ANDROID LEARNING APP — Solo Developer

LearningTech

Native Android app with video and article modules on Firebase.

- Independently built a native Android app with video and article modules.
- Integrated Firebase Firestore (NoSQL) and Firebase Storage for content management.

Java · Android · Firebase

BACKEND PRACTICE PROJECT — Solo Developer

Simple Restaurant API

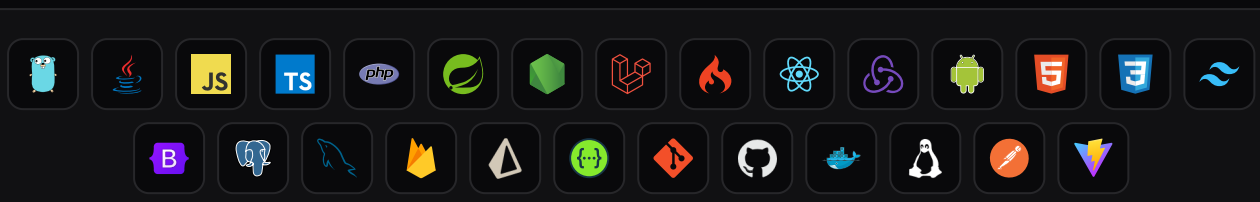

Layered Spring Boot API for menus, customers and transactions, documented with Swagger.

- Backend simulating core restaurant operations: menu management, customer records and transaction processing.
- Layered architecture (Controller–Service–Repository) with DTOs mapped via MapStruct.
- Pagination and filtering with Spring Data JPA, and interactive API docs with Swagger (OpenAPI).

Java · Spring Boot · PostgreSQL · Swagger

SKILLS

Tools I work with

LANGUAGES

- Go
- Java
- JavaScript
- TypeScript
- PHP
- SQL

BACKEND

- Spring Boot
- JPA
- Node.js
- Laravel
- CodeIgniter 4
- REST API
- JWT

FRONTEND & MOBILE

- React
- Zustand
- Redux
- React Native
- Android

DATABASES

- PostgreSQL
- MySQL
- Firebase Firestore
- Prisma

PRACTICES

- OOP
- Agile/Scrum
- Unit Testing
- UAT
- Swagger

TOOLS & AI

- Git
- Docker
- Linux
- Postman
- Claude Code
- Cursor

CREDENTIALS

Education & leadership

Education

Bachelor of Informatics (S1) — in progress
Asia Cyber University
`Apr 2026 - Present`

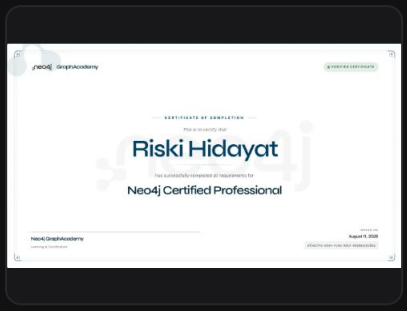

D3 Informatics Management
Politeknik Negeri Lampung
`Graduated 2025` `GPA 3.89 / 4.00`

Organization

Vice Chairperson
Polinela IT Center — Hima Prodi Manajemen Informatika
Organised IT knowledge-sharing sessions with external speakers and led team-bonding activities within the organisation.

CREDENTIALS

Licenses & certifications

Neo4j Certified Professional 2026
Neo4j

Fullstack Developer Bootcamp 2025
Enigma Camp IT Bootcamp

Junior Web Programmer 2025
BNSP

ACA Developer Certification 2025
Alibaba Cloud Academy

NDG Linux Essentials 2023
